The last two decades have seen enormous changes in the way people's lives are affected by IT. Twenty years ago, few people had access to a computer while today most people use them at work, home or school and use of e-mail and the Internet is an everyday event.

These developments have brought many benefits to our lives. E-mail makes communication much easier and more immediate. This has numerous benefits for business, commerce, and education. The World Wide Web means that information on every conceivable subject is now available to us. Clearly, for many people this has made life much easier and more convenient.

However, not all the effects of the new technology have been beneficial. Many people feel that the widespread use of e-mail is destroying traditional forms of communication such as letter writing, telephone and face-to-face conversation. In addition, the huge size of the Web means it is almost impossible to control and regulate. This has led to many concerns regarding children accessing unsuitable websites. In conclusion, developments in IT have brought many benefits, yet I believe developments relating to new technology in the future are likely to produce many negative effects that will need to be addressed very carefully.

Question 21. According to the passage, E-mail _____.

- A. reduces face-to-face contact B. can be checked quickly and easily
C. is used only in business D. takes a lot of time to transmit

Question 22. The World Wide Web and e-mail communication _____.

- A. causes a busy and exciting life. B. have also been used for education purpose
C. is difficult to get access to D. is destroying traditional customs

Question 23. What does the IT stand for?

- A. Information Transfer B. Information Transmission
C. Information Theory D. Information Technology

Although they are safe to use in a short term, coal, gas and oil present a long –term threat to the environment. All three types of fossil fuels produce carbon dioxide in far greater quantities than plants can use. The carbon dioxide then accumulates in the atmosphere and may even increase the earth's " heat load" and lead to global rises in temperature. Furthermore, all three fossil fuels are non-renewable forms of energy.

Geothermal power is unlikely ever to be an energy source of major importance. It is limited and is exploitable in only a few places. Hydro-power offers a much more useful source of energy. It is also renewable but its availability is limited. Dams cannot be built in certain areas. Wind power is a pollution-free source of renewable energy but it cannot be used in many parts of the world where there is insufficient wind. Wave power is non-polluting and doesn't add to the earth's heat but it is ineffective where the sea is usually calm.

Solar energy is renewable, it doesn't cause pollution and it doesn't add to the earth's heat load. Unfortunately, solar power is not distributed equally and it also requires expensive equipment. Finally, nuclear power provides a very efficient and renewable power source. However, not only is there a great danger of leaks or accidents but there is also the problem of the disposal of radioactive waste.

Question 21. The threat caused by fossil fuels in the long term is _____

- A. the greater quantities of carbon dioxide in plants. B. the safety of using them.
C. the increase in global temperature. D. the non- renewable forms of energy.

Question 22. The following renewable energies are not polluted EXCEPT _____

- A. wind power. B. wave power. C. solar power. D. nuclear power.

Question 23. Geothermal power is less popular than other renewable energies because _____

- A. it costs a lot to exploit. B. it's not available in many places.
C. it's polluted. D. it's dangerous sometimes.

Question 24. What is NOT true about the passage?

- A. Like any other renewable energy, solar power has some disadvantages.
B. The use of solar power and wind power depends on the weather.
C. Fossil fuels are unlimited and safe to use in the distant future.
D. Where dams cannot be built, hydro-power is impossible.

Stamp collecting is the collecting of postage stamps and related objects, such as envelopes or packages with stamps on them. It is one of the world's most popular hobbies, with estimates of the number of collectors ranging up to 20 million in the United States alone. Many casual collectors enjoy accumulating stamps without worrying about the tiny details, but the creation of a large or comprehensive collection generally requires some philatelic knowledge. This is especially important for those who intend to spend large amounts for stamps.

Stamp collectors are an important source of revenue for some small countries that create limited runs of elaborate stamps designed mainly to be bought by stamp collectors. The stamps produced by these countries far exceed the postal needs of the countries. Some collectors, observing the generally rising prices of rare stamps, have taken to Philatelic Investment. Rare stamps are among the most portable of tangible investments, and are easy to store. **They** offer an attractive alternative to art, other collectible investments, and precious metals.

Read the passage and choose the correct answer A, B, C, or D to each question. (1.0 point)

How many planets are there in our galaxy? That's a tricky question to answer. Are there other planets that support life? That's exactly what the Kepler mission hopes to discover.

NASA launched the Kepler space telescope, designed to find habitable planets, in 2009. So far it has discovered five new Earth-sized planets beyond our solar system. These planets are hotter than the Earth -much too hot for life as we know it. The Kepler team predict that they will need at least three years (and possibly longer) to find an Earth-like planet.

The simplest requirement for a planet to have life is for there to be liquid water (not frozen or gas) so the distance from the planet's sun and therefore temperature are important. There also needs to be the correct amount of air. If a planet is as small as Mars (half the size of Earth) its weak gravity means that it can't hold on to air molecules. If a planet is Neptune sized (four times bigger than Earth) it has very strong gravity and too much air. So size matters too.

The cost for the mission is approximately six hundred million dollars. It is scheduled to observe until 2013 but this could be extended. Will we be sad if we discover we are *alone* in our galaxy or happy if we find that we share it with other life forms?

Question 21. What is the passage about?

- A. Planets in our solar system. B. The difference between the Earth and other planets.
C. Space exploration to find habitable planets. D. NASA's missions to explore the outer planets.

Question 22. What is the Kepler space telescope looking for?

- A. new planets in our galaxy. B. life on other planets. C. new galaxies. D. objects in space

2. Read the passage and choose the item among A,B,C or D that best answers the questions:

Anyone who thinks that bats are unsafe pets is wrong in most cases. In fact, most species of bats are helpful to human beings. Sixty to seventy percent of bat species eat insects. These bats will eat

anything that they find as they fly through the air at night. Some people even try to attract bats to their property to help control mosquitoes. Other bats are necessary to the pollination of species of plants. Unfortunately, bats are frightening to anyone who believes in the old stories of vampire bats. In reality, only three species of bats feed on blood, usually only from small animals. It is true, however, that vampire bats can spread diseases such as rabies, respiratory syndrome like hard in breathing, dangerous virus, etc. to other species. Even though many people will continue to dislike and fear bats, it is important to remember that they are an important part of the ecology, especially, in rainforests. Anything that endangers to bats in these areas will also affect the regions' fragile ecosystems. Anyone who is interested in learning more about bats can visit his or her local library as much as possible to see their value and protect them.

The last two decades have seen enormous changes in the way people's lives are affected by IT. Twenty years ago, few people had access to a computer while today most people use them at work, home or school and use of e-mail and the Internet is an everyday event.

These developments have brought many benefits to our lives. E-mail makes communication much easier and more immediate. This has numerous benefits for business, commerce, and education. The World Wide Web means that information on every conceivable subject is now available to us. Clearly, for many people this has made life much easier and more convenient.

However, not all the effects of the new technology have been beneficial. Many people feel that the widespread use of e-mail is destroying traditional forms of communication such as letter writing, telephone and face-to-face conversation. In addition, the huge size of the Web means it is almost impossible to control and regulate. This has led to many concerns regarding children accessing unsuitable websites. In conclusion, developments in IT have brought many benefits, yet I believe developments relating to new technology in the future are likely to produce many negative effects that will need to be addressed very carefully.

Question 29. What does the IT stand for?

- A. Information Transmission B. Information Theory
C. Information Technology D. Information Transfer

Question 30. According to the passage, E-mail _____

- A. reduces face-to-face contact B. can be checked quickly and easily
C. is used only in business D. takes a lot of time to transmit

Question 31. Which sentence is NOT mentioned?

- A. The World Wide Web provides information. B. The World Wide Web is difficult to navigate.
C. The World Wide Web is difficult to control. D. E-mail communication is quick and easy.

Question 32. The writer thinks future IT developments will be _____

- A. more positive B. more negative C. more rapid D. unexpected

Read the following passage and choose the best answer to each of the questions from 29 to 32.

Scientists believe they now have scientific evidence to prove that ecosystems work better when there is greater variety of species within them. This biodiversity is being lost destroying natural mechanisms that could repair the damage caused by man.

Findings show that losing plants and animals is not only reducing our quality of life but actually endangering our very existence. We cut down rich rainforests and replace them with one species plantations, such as pine and eucalyptus. We plough up meadows rich in different grasses and herbs and replace them with one grass, for instance rye or wheat.

When a natural ecosystem is simplified the basic processes in the ecosystem are altered and even damaged. Without their biodiversity they are not able to serve as the natural cleaners of our planet. No longer are they able to absorb the carbon dioxide that is being produced in excess. The result is global warming, caused by the increase in the 'greenhouse effect', and ultimately, or even sooner, there will be a change in the world's climate.

Question 29. Which of the following is the best title for the passage?

- A. How Ecosystems Work Better B. The Loss of Biodiversity
C. The Variety of Species D. Natural Mechanisms

Question 30. Which of the following is not a species used to replace a rich ecosystem?

Question 31. What is the purpose of paragraph 2?

- A. To show natural mechanisms at work. B. To give examples of the loss of biodiversity.
C. To give example of variety of species. D. To show how ecosystems can work better.

Question 32. What, according to the passage, might be the final result of the simplification of natural ecosystems?

- A. The basic processes are altered B. There is loss of biodiversity
C. There is global warming D. There is a change in the climate.
